

Moeller has been the marine industry's leading fuel system manufacturer for more than 30 years. We are the largest rotational molder in the industry.

Moeller offers EPA-compliant, custom designed and engineered two-layer plastic and aluminum fuel tanks. Our engineering and design teams work with each customer to develop cost-effective solutions which are fabricated by skilled manufacturing technicians in our facility in Sparta, TN.

In addition to fuel tanks, we manufacture water and waste tanks and other molded products. Our aftermarket line includes fuel tanks, fuel lines and fittings, paint, live wells, and other marine accessories. Outside the marine industry, we produce containers for biodiesel waste oil collection and molds for a range of industrial applications: pressure washers, cleaning and roadside equipment, and more.

At Moeller Marine, we are proud of our people, proud to serve our customer base, and proud to be part of the local Sparta community.

Fuel  
System  
Manufacturer

*Fueling the Fun!*

Quality.

Reliability.

Durability.

We don't just  
**SAY** it—

We **DO** it.

That's why Moeller is  
the Marine Industry  
Standard in Fuel  
System Construction.

That's why our plant  
has tripled in size  
since 1990.

That's why we have  
introduced an  
aluminum tank line  
and are expanding our  
reach into biodiesel and  
other industries.

Boater and Customer Pryce Richards

*"Moeller has the kind of customer service department that wins awards. I've never experienced this level of attention and commitment from another customer service group— in any industry."*

But the Moeller Story doesn't stop there! In the words of one satisfied customer, "Moeller's service has become a miracle from the old days!" In 2014, our overriding commitment to customer satisfaction was recognized when we became ISO 9001:2008 certified.

## **25 Years in Sparta, TN and Growing Strong !**

The Moore Company, a 100 year-old privately held corporation, purchased Moeller Marine Products in the mid-1980s. At that time, Moeller was based in Greenville Mississippi and manufactured rubber rollers for boat trailers. In 1990, Moeller Marine Products expanded its product line and moved to its present location in Sparta, TN.

Today, Moeller is flourishing, both domestically and abroad. We build up to 350 new molds and produce 175,000 rotationally-molded fuel tanks each year. Since 1990, our plant size has expanded to 300,000 sq. ft. Our design and manufacturing capabilities include:

- Outstanding engineering: design, manufacturing, quality, product development
- Four full-time certified Solid Works designers
- Robust quality department with an in-line QA emphasis; PPAPs, analysis, and testing
- Fifteen skilled toolmakers working two shifts to build and maintain tooling
- Aluminum fabrication equipment, including CNC cutters and benders
- Eight rotational ovens, one rock & roll machine, one 5-axis router, and one blow-molding unit to meet demand fluctuations
- More than 130 skilled molding and assembly personnel

*"When I tell someone where I work I can say it with pride. We work hard and our products and our team of people are top quality."*
